Seven of this Year's Nominees for the Best Aircraft-Cabin Innovations

Kestrel oversaw the design and completion of this custom-configured [**Boeing Dreamliner**](#), an aircraft that can make 17-hour flights and, in airliner form, carry 240 passengers. The forward area of the lounge is furnished with twin sofas that slide together electronically to form a daybed that faces a 55-inch video screen. Adjacent to the sofas are four single seats (two on each side of the aircraft) with pop-out tables that can serve as workstations. In the master suite, the walls are equipped with extra soundproofing to further insulate the space from engine noise and sounds from the main lounge. The suite is furnished with a California king-size bed, a 42-inch video screen, and a refrigerator and freezer in the dressing area.
